Environmental Policy

At Reliable Pat Testing, as a specialist in Electrical Testing, we recognize our responsibility to the environment. While our operations do not involve the manufacturing of products or the handling of hazardous substances, we are committed to minimizing our environmental impact. To this end, we pledge to:

- Comply with all current environmental legislation.
- Implement responsible waste management practices.
- Prioritize the use of recycled materials whenever possible.
- Keep our employees informed about environmental issues and best practices.
- Maintain our company vehicles to the highest standards, ensuring they are up-to-date and serviced regularly to reduce emissions and improve fuel efficiency.

Policy Update: February 10, 2012

In our ongoing efforts to reduce our environmental footprint, we now provide all test results and certificates online through our secure server. Once testing is completed, you will receive a username and password to access your documents via our control panel.

While we continue to offer hard copies upon request, we encourage you to consider the environment before printing.
